Createspace, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Given the likely impending installation of many technologically advanced lift stations in the United States, municipalities will recognize that their savings of manpower costs gain greater importance. This is done by no longer having to remove and replace clogged pumps as the DIP System(r) pumps are self-cleaning. Additional savings will accrue as the corrosion of lift station equipment and the station itself will cease. The use of bar screens and rakes, trash baskets, or comminutors, all requiring regular cleaning and maintenance at the wet well is no longer needed. The issue with flushables causing problems with lift station pumps will no longer need personnel attention. The neighborhoods will experience the added relief of no longer having the hydrogen sulfide gas odors due to the required local retention of sewage in a wet well as has been the practice through using submersible pumps for the last 60 years. The need for a wet well is also eliminated and it is converted to a clean, dry pumping system work area that is now safe for employees. A separate valve vault is not needed and the footprint of the station is smaller. The DIP System(r) lift station is remotely managed, not just monitored, as some submersible systems currently report. The management can be done via a smart phone, a tablet, or a desktop computer from anywhere. The operator has the ability to visually see the performance of the pumps, make any adjustments if desired, run tests, and even order printed reports to be delivered to management via remote printer from his office, the cab of his truck, or his kitchen table on a weekend. The typical daily or routine lift station...
